

ABSTRACT

An information reproduction device includes; a player module 2 for reproducing, in response to a reproduction command in page information received, content data included in the page information; a browser 1 for outputting the page information along with the content data returned to the player module 2; and a database module 3 for previously storing the content data which the player module 2 can reproduce. The information reproduction device transmits request information requesting the page information to a server 5 connected to it via a network 4. To receive the page information and a content data in it, the information reproduction device requests the content data corresponding to the reproduction command from the database module 3 or the server 5.
